

## General conditions for approval PDFs of screenprinted cartridge designs:

Our view PDFs are mainly used for **checking the text** and as an indication of how the layout will be laid out for printing. You can see what size the supplied data will take up in our page layout of **155 x 188 mm**.

We print from right to left side. This means for the finish that the left side of the design print approx. 2-3 mm into the right side.

Which colors are applied in which tone gradations in the file is not a test criterion for us. However, we must point out that an **ink application of less than 10% is not printable**.

**Gray tones** that are not created in spot colours are printed with rasterized black and thus halftone dots are clearly visible.

Each motif looks on each monitor (RGB colour mode) and on each colour hard copy (CMYK colour mode) different from the colour representation. Our special colours for screen printing cannot be simulated on paper. You have to consider that paper is a very different substrate for printing than plastic.

Our approval PDF is, no matter which file types are delivered and no matter which colours are applied, it's NEVER colour-binding. Please check the colours according to the respective color selection and show them to your customers. The colour definition is the responsibility of the agency or customers data creation.

The **maximum number of colours** including white is **6 colours in screen printing**.

Only via the clear colour name specification (PANTONE (PMS) / HKS K / RAL) in our cartouche motif attachment text, we guarantee that the design will also be printed with the specified colours.

Anzahl der Farben:	5
Farbe:	schwarz, PMS 166 orange, PMS 291 blau, PMS 4705 braun Textweiss 1133
Motivnummer:	G03097-SD-00
